Coles Supermarket, Lithgow

ACO's stainless steel channel and grate systems have been part of Coles' brief since 2007.

At the recently completed Lithgow store, ACO's Modular 100 system, complete with strainer baskets, provided the client with a hygienic solution. This is typically required for washdown areas such as the delicatessen and bakery. ACO's Heelsafe® Anti-Slip grates also provided slip resistance ensuring the safety of Coles' employees.

Designers also specified special edging to perform specific functions, the Vinyl Edge seal for a watertight joint between the channel's edge and the vinyl floor and, in the cool rooms and meat preparation areas, a reinforced solid edge for protection against trolley jacks.
