# DANONE UKRAINE Kremenchuk

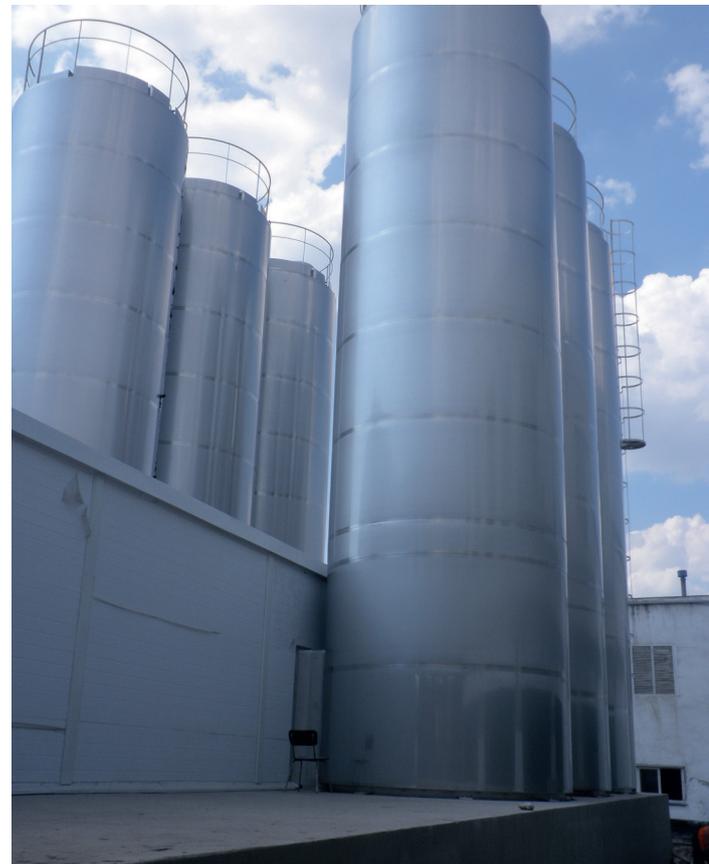

### DANONE Ukraine

The plant was founded in 1929 and at the time processed 600 tons of milk per year. In 1986 a plant reconstruction which created new production areas and a new boiler room was undertaken, increasing capacity to 180,000 tons per year. Production of whole milk, ice cream, powdered milk, butter, cottage cheese started. Since 1999, the plant has had a major reorganisation and production has been modernised: new lines for the production of dry milk, ice cream, glazed cheese curds. In 2004 here, for the first time in the Ukraine, production of milk in PET bottles started. In 2010 the integration of Unimilk and Danone began and in 2011 the joint company "Danone-Unimilk" resumes work on the reconstruction with the new product development complex.

Today 330 employees work at the plant in Kremenchuk, which produces 50,000 tons of milk, butter and lactic-acid products per year.
