Modular 125 with HD ladder grates and Point Drain
ITS Panama

Cerveceria Baru (Heineken) needed a sufficient drainage solution for their production line. As one of ACO's distributors, Heineken decided to have about 232 linear feet of Modular 125 channels with HD ladder grates, as well as 11 Point Drains strategically placed throughout the area.

ACO Building Drainage Modular 125 channels are available in AISI 304 or AISI 316L grades of stainless steel, with longitudinal slopes ranging from 0.5% - 5%. The matching heavy duty ladder grates also ensure that a wide range of weight loads can pass over without issue.
