## WINERY J. Stávek, Czech Republic

Based in NĚmčičky in the heart of South Moravia in the Czech Republic, VINO J. Stávek winery was founded in 1929. A family business for five generations, today the winery is run by the founder's great grandson Jan Stávek, a prominent winery expert who teaches at leading winery schools, sits on winery committees and produces wines that win the top prizes in wine competitions.

Mr. Stávek develops his business with a focus on producing top quality wine and maximizing effectiveness and last year the winery produced more than 35,000 bottles of wine.

With demand for his wines increasing every year, it was decided that the current facility needed a major expansion and the winery now has a new purpose-built production facility which can produce up to 65,000 bottles per year as well as store the older wines which are real pride and joy of any winery enterprise.

The new facility is built according to most stringent European standards and is designed specifically for the production of high quality wines with pure, intense aromas – a factor which lead Mr Stavek to chose ACO Building Drainage as its drainage partner for the project.

ACO was able to supply BASF's chemically resistant UCRETE floor, ACO slot channels and ACO gullies. This high quality combination of flooring and drainage simplifies cleaning in production and also ensures that the facility meets the highest standards for hygiene.

Precise integration of flooring and drainage also prevents future problems with cracks which can harbor bacteria. The ACO solution also allows the winery to use forklifts and, in addition, maximizes the safety of winery employees.

### Customer testimonial

#### J. Stávek

Owner and enology expert VÍNO J.STÁVEK

Mr Stávek, owner and enology expert VÍNO J.STÁVEK, comments:

“When we started looking for a suitable flooring provider we found out we could work with ACO to deliver both flooring and drainage. After a few discussions, ACO offered us a drainage and flooring solution in cooperation with BASF. We now have an ideal solution which fulfills all the demands of winery production.

The great advantage of using ACO drainage and UCRETE flooring is there is not one joint on entire span of the production facility floor. As joints tend to hold in impurities which can harbor bacteria and create foul odors that could be absorbed by the wine, this could impact on the quality of the wine we produce. ACO's drainage products have an absolutely smooth surface with no sharp corners or edges. This prevents sediment deposition and allows fast and effective cleaning.

Stainless steel is also a highly durable material which is really important for any winery business. My business is based at Winery Court which was established by my great grandfather in 1929 and I'm still thankful that he did not compromise on the quality of the original building as it still serves it purpose even today.

I'm certain that the improvements I have made will still be effective even when my children take over the business and I know it's not worth saving money in the short term on such important parts of the building as flooring and drainage.

I can strongly recommend the combination of UCRETE floor and ACO stainless steel drainage to all wine producers, which are not building their businesses just for themselves but similarly to my great grandfather, for several future generations.”
